

Right-first-time midstream,
analysis, diagnosis and treatment

Testimonials on Peezy's efficacy, from clinicians and patients

Clinicians

The Consultant Gynaecologist

"Hospital acquired infection is a major problem in today's NHS. Obtaining urine samples is currently a procedure that is very variable in both collection methods and infection control procedures surrounding the collection. The Peezy can change all this and has enormous potential as a tool to help the fight against infections contracted in hospitals and GP surgeries. Infections that can be carried in urine include Chlamydia, Gonorrhoea, Hepatitis B and C, HIV and MRSA, as well as all the more common organisms of urinary tract infection such as E Coli.

This elegantly simple device can make a major contribution to improved patient care and the health and safety of doctors, nurses, laboratory technicians, cleaning staff and many others in the NHS. I look forward to seeing it used in my clinics and on the wards."

Dr Jane Preston, Consultant Gynaecologist

The GP

"In my GP practice and also as a hospice physician, I find current methods of urine collection totally unsatisfactory. Most patients find it almost impossible to provide an actual mid-stream sample, which is what an MSU is all about. At first sight, I was bowled over by Peezy's elegance and simplicity. I think it is a much-needed solution to a very old and ongoing problem. I am sure that most doctors and nurses will feel the same."

Dr Simon Berrisford, GP

The Nurse

"I saw a 60-year-old woman with a PMH of diabetes, stroke and with learning difficulties who had been troubled with urge incontinence for months. Peezy yielded the first ever urine sample from this patient followed by diagnosis and treatment. I have seen the patient since, obtained another Peezy sample and things are improving."

**Barbara Oldham, Practice Nurse,
Great Yarmouth and Waveney PCT**

The Urogynaecologist

"Urine collection is central to my work. The existing methods of urine collection cause my patients embarrassment and distress, often with hands, clothing and feet contaminated with their own and others' urine. This contamination, and the consequent distress and hazards, are passed down the human chain that the urine sample takes through the process of analysis. The Peezy instantly solves this problem and will be welcomed with open arms by anyone having to provide or process a urine sample. In one step it stops the mess and risk of urine collection, and restores dignity to an undignified procedure."

Mr Nick Oligbo, Consultant Urogynaecologist

The Consultant

"My patients are delighted as it dignifies the whole procedure. It also means that I have confidence in the quality of the results."

**Mr Adrian Lower, Consultant Gynaecologist,
The London Clinic**

The Ward Manager

"We can use the Peezy for all types of patients. Pre-assessment MSUs, MSU for cultures, weekly urine testing prior to chemotherapy and so on. It has been easy to use with any age range or dexterity and proven to be cleaner than trying to get ladies to urinate directly into a bottle or risking cross contamination by using a bed pan."

**Anthony Barrett, Acting Ward Manager, Urology, North
Staffordshire Hospital**

Patients

Healthy Woman

"Peezy is great. You can see what you're doing and there's no mess. It's such a great invention, convenient, simple and easy to use."

With Learning Difficulties

"My daughter has learning difficulties and long-term history of chronic UTIs. Peezy helped me take the first ever mid-stream sample from her, easily, cleanly and with no fuss. Now, at last, she can be correctly diagnosed and treated. Thank you Peezy."

Healthy 30 yrs

"I really like it, it makes the whole thing much easier and cleaner."

Arthritic 68 yrs

"A very easy way of giving a mid-stream sample."

Healthy 30yrs, 7-months pregnant

"Much better than usual bottle which is almost impossible to use when very heavily pregnant!"

Healthy 21yrs

"Its easy to use, impossible to get wrong and so clean. It is definitely my preferred method for providing a specimen. A fantastic product."

Young Child

"My daughter has learning difficulties and long-term history of chronic UTIs. Peezy helped me take the first ever mid-stream sample from her, easily, cleanly and with no fuss. Now, at last, she can be correctly diagnosed and treated. Thank you Peezy."

The Elderly

"Good! Good! Much better! Much better!"

48 year old Mum

"It's so easy to use. Between the ages of six and eight, my daughter had constant urinary tract infection and required daily urine sampling. Peezy would have made this far less of a challenge for her and reduced the daily upset."

Healthy 35yrs

"Very neat and very clean. Once you've used it, you'll always know how to use it again. Not getting pee on your hands is really amazing."
